Build FY26 Ships You Should Know

How to use this deck

Four Build FY26 ships that **didn't fit** into the core Day 2 modules — but are worth a few minutes.

- **Skippable by design.** Each slide stands alone — cherry-pick any single ship.
- **Two modes:** walk it all (~5–7 min), or hand it out as post-workshop reading.
- **Every link lives in the speaker notes** — press **S** to open, copy/paste mid-session.

Press **S** any time to surface the links for the slide you're on.

Four Messaging Pillars

The frame Microsoft set at Build FY26 · June 2–3, 2026

PILLAR 1

Agent Choice in the Pipeline

Agents are first-class in the SDLC — issues, PRs, reviews, comments, discussions, terminal, and the Agents tab.

PILLAR 2

Model Choice & Process Durability

Copilot is the constant. Swap models freely for quality, latency, cost, or task fit.

PILLAR 3

Fluid Compute, Governed Execution

Sandboxes across local / remote / cloud — with enterprise controls.

PILLAR 4

Intelligent Apps & Custom Agents

Copilot SDK GA across Node / TS / Python / Go / .NET — plus new Java + Rust.

Agent-native engineering system — turn intent into trusted software.

AI Skills — Reusable Agent Capabilities

Hangs off Pillar 4 · custom agents & intelligent apps

WHAT

Auto-discovered skill folders (e.g. `.github/skills/`). Each holds a `SKILL.md` with YAML frontmatter — name, description, trigger keywords, `allowed-tools`.

The agent **invokes a skill automatically** when your request matches its triggers — or call it directly by name.

WHY IT MATTERS

Versionable — skills live in git, right next to your code.

Shareable — clone or install from a repo; no copy-paste prompts.

No fine-tuning — extend the agent's behaviour without touching the model.

Live demo: `cheatsheet.ps1` — installs a community PowerShell skill, then scaffolds an `InfraReports` module with it.

Skills Marketplace — Discover → Install → Use

1 · Discover

Search the ecosystem: `gh search code "SKILL.md"`, the [awesome-copilot](#) gallery, or community repos like [jorgeasaurus/agent-skills](#).

2 · Install

Drop a skill into `.github/skills/` — clone & copy, or `gh skill install <owner>/<repo> <skill>`.

3 · Reload

Reload the window so the agent re-discovers the skills folder. The new skill is now live.

4 · Use it

Prompt naturally and name the skill: "...create a PowerShell module... *use the powershell-module-scaffold skill.*"

Four Ships at a Glance

Copilot Desktop App TECHNICAL PREVIEW

Standalone control center for orchestrating parallel agents across repos.

Cloud Agent Automations

Schedule or event-trigger Copilot cloud agent runs to kill toil.

Agent Apps (3P) PUBLIC PREVIEW

Partner GitHub Apps that embed autonomous agents, under governance.

Code Review · Azure Repos TECHNICAL PREVIEW

Agentic on-demand Copilot PR reviews built into Azure DevOps.

GitHub Copilot Desktop App

TECHNICAL PREVIEW

WHAT

Standalone desktop app (macOS / Windows / Linux). A **control center** for orchestrating multiple AI agents in parallel, across repositories.

Each session runs in an **isolated git worktree** — no branch conflicts, no context switching.

WHY IT MATTERS

Shift from *code-centric* → **planning / design-centric**. Agents execute; you direct strategy.

Canvas + Agent Merge + a **My Work** dashboard reduce context switching.

Get it: Tech preview now for Copilot Pro / Pro+ / Business / Enterprise — **no waitlist**. Download at github.com/github/app .

Cloud Agent Automations

WHAT

Schedule Copilot cloud agent runs — **hourly / daily / weekly** — or trigger on repo events (new issue, new PR).

Per-automation **tool allowlist**.

WHY IT MATTERS

Eliminate toil:

- Triage incoming issues
- Fix nightly test failures
- Prepare weekly release notes

Get it: Pro / Pro+ / Max / Business / Enterprise on private + internal repos (public coming). Create via the **Agents tab** or **Copilot desktop > Automations**. Business/Enterprise: enable the cloud agent policy first.

Extend GitHub with Agent Apps PUBLIC PREVIEW

WHAT

Specialized GitHub Apps from **3P partners** that embed autonomous agents — multi-step tasks, execute commands, write code.

Run on **issues / PRs / branches**.

WHY IT MATTERS

Extend Copilot with third parties **while maintaining governance**. Async, parallel work.

Partners at launch

Amplitude · Bright Security · Endor Labs · LaunchDarkly · Miro · Sonar · PagerDuty · Packfiles · Octopus Deploy

Get it: GitHub Marketplace. Org/enterprise admins enable the agent apps policy first.

Copilot Code Review · Azure Repos

TECHNICAL PREVIEW

WHAT

Agentic, **on-demand Copilot PR reviews** built into Azure Repos. Inline comments + suggestions. Technical preview, June 2026.

WHY IT MATTERS

Faster reviews → higher-quality code merged faster. Catches issues earlier. Teams **stay in Azure DevOps** — no context switching.

Get it: sign up at nam.dcv.ms/VeDNq3VRhX . Org admin enables at org + repo level.
