

Wrap-up & Homework

What you learned. What to try. What's next.

Today in Three Beats

A light recap. You lived it — no re-teach.

Paradigm

Assistant → Agent.

You own Design. Agent owns Implement.

Context

Context > phrasing.

Prompts aren't magic — they're feeding facts.

Practice

Hands on keys.

L1 — you ran the loop yourself.

The Loop You Learned

Design · Plan · Implement · Test · Review

You own → Design · Plan

Agent leads → Implement · Test · Review

The boundary moves as trust grows.

Your Homework

Between now and June 15, in your own work —
catch yourself thinking:

“An agent could do this.”

Write it down — one line is enough. Bring it back.

Not a lab. Observation.

Optional Runway

If you want extra reps before June 15 — these are bonus, not required.

Microsoft Learn

GitHub Copilot Learning Path — self-paced modules, no extra setup.

learn.microsoft.com/training/paths/copilot

awesome-copilot

Browse skills, agents, and instructions — a preview of what L5 builds on.

Day 2 — June 15

Three moves. One arc.

Trust the Loop

M10 + L3

Agent Mode Deep Dive — run it yourself

Give It Tools

M12 + L4

MCP showcase · 2 tracks · Azure + Terraform · PowerShell + DrawIO

★ Ship It

L5 · ADR Architect

Customize a skill + agent → ship an ADR via GitHub MCP
