

Day 1 Recap & Homework Review

Welcome back. Let's reconnect — then practice trusting the loop.

Day 1 → Between Sessions → Day 2

The whole module in one breath.

Day 1

You learned **the loop**.

Design · Plan · Implement · Test · Review

Between Sessions

You **noticed** where an agent could help.

Back in your own work, in your own backlog

Day 2

We practice **trusting the loop**.

Stop talking about it. Run it.

Day 1 in Three Beats

Paradigm

You own Design.
Agent owns Implement.

Context

Context > phrasing

Practice

Hands-on beats theory

Also on Day 1: we touched **AI Skills** — reusable how-to instructions for agents.

Between Sessions: What Did You Notice?

Where did you catch yourself thinking —

“an agent could do this”?

Show of hands. Then tell me one.

Anything Still Blocking You?

What didn't click from Day 1?

What didn't work when you tried it at home?

What We're Building on Day 2

The path bends toward ★ L5 — a customized agent + skill writing (and shipping) a real ADR by 17:35.

Trust the Loop

M10 · Agent Mode Deep Dive

+ L3 lab — run it yourself

Give It Tools

M12 · MCP Showcase

A/B split · Azure + Terraform · PowerShell + DrawIO · then L4

★ Ship It

L5 · ADR Architect Agent

Customize skill + agent → ship an ADR via GitHub MCP

Safety & guardrails (M15) close the day.

Even Seasoned Engineers Are Recalibrating

"Jeffrey Snover's keynote session from last week's PSConfEU is already online and it just was this eye-opening moment for me... **My views on AI are no longer in correspondence with reality.** I need to change the way I'm thinking about AI and **I need to let go of control** (which is hard as a control-freak) **to gain more leverage** in this ever moving world of technology. I need to use the engineering skills I've built up over the years to help me recalibrate and **try the orange 🍊!**"

Robert Prüst, Microsoft MVP

Re: *Navigating the AI Revolution* — Jeffrey Snover, PSConfEU 2026
