

MODULE 1 · DAY 1 · 14:00

Welcome to the Matrix

GitHub Copilot + Agents — for DNV Cloud Infrastructure

Jan Egil Ring & Haflidi Fridthjofsson · Microsoft
Two sessions · Remote (Teams)

Practicalities first

- **Teams chat** is the main channel — drop questions anytime, we batch-answer at break points
- **Breaks** at 15:00 and 16:40 — they're real, take them
- **Cameras on** if you're comfortable
- **Lab repo** — link in chat, clone before lab 1
- **Recording** — yes, for your team's reference

From *using* Copilot to *building* agents

WHO'S IN THE ROOM

- ~20 from DNV GSS IT Cloud Infrastructure
- 2 champions, ~18 intermediate / beginner
- Senior cloud architects & technicians

WHAT WE'RE AFTER

- **Foundations** — Copilot inline, chat, context
- **Paradigm shift** — assistant → agent
- **Practice** — 5 labs, 1 capstone (ADR generator)
- **Safety** — guardrails for real infra work

Creators, not consumers — leave with 3+ agent use-cases for DNV.

Day 1 — Today

TIME	MODULE	FORMAT
14:00	M1 — Welcome & The Matrix Briefing (you are here)	Intro
14:20	M2 — Copilot Fundamentals · Seeing the Code	Demo
15:00	M3 — 🍷 Break	—
15:15	M4 — Copilot Chat · Talking to the Oracle	Demo
15:55	L1 — "Hello, Copilot"	★ Hands-on
16:15	M5 — Context is King · Prompt Crafting	Workshop
16:40	M6 — 🍷 Break	—
16:55	M7 — From Assistant to Agent · The Paradigm Shift	Presentation
17:30	M8 — Wrap-up & homework	Discussion

Day 2

TIME	MODULE	FORMAT
14:00	M9 — Day 1 recap & homework review	Discussion
14:15	M10 — Agent Mode deep dive	Demo
14:55	M11 — ☕ Break	—
15:10	L2 — Prompt Dojo · Context Engineering	Lab
15:35	L3 — Agent Mode Playground	Lab
16:00	M13 — ☕ Break	—
16:10	M12 — MCP Showcase · The Architect's Tools	Demo
16:40	L4 — Custom Agent Config & MCP Integration	Lab
17:05	L5 — Capstone: ADR Generator Agent ★	Lab
17:50	M15 — Safety & Guardrails · Rules of the Matrix	Wrap

M1 · refresh

“ There are plenty of things to remain skeptical about AI. But if you are still in the camp that thinks AI is just a parlor trick — you need to hit **F5** on that thinking. ”

Jeffrey Snover · inventor of PowerShell · LinkedIn, 2026

The Siri moment

You tried Siri in 2015. It was rough. You stopped using it.

Ten years later you'd still tell me it's bad — without having opened it.

That's where most engineers are with AI coding today.

What flipped Snover

Claude Opus 4.6 (Feb 2026). Quote: *"I'm really quite embarrassed — I have no idea what the hell I'm doing with Claude. I just downloaded it, typed **claude**, and started typing. And I'm making so much progress."*

Three thresholds crossed at once

1 · Models

Frontier models crossed a quality threshold. Not all — enough. **Opus 4.6** , **GPT 5.3**—**Codex** , **Sonnet 4.6** .

2 · Harness

Claude Code, Codex CLI, Copilot CLI. Not editors — *terminals that write code*. You stop reviewing every line within hours.

3 · Cadence

Opus 4.6 dropped early Feb. **Fifteen minutes later** GPT dropped 5.3-Codex. The field is leapfrogging weekly.

Whatever you knew about AI coding **six months ago is stale data**.

Assistant → Agent

YESTERDAY — ASSISTANT

- You write 3 lines
- It suggests line 4
- You accept / reject
- You're always at the wheel

Linear. Reactive. Per-line.

TODAY — AGENT

- You state intent
- It plans, calls tools, runs tests
- It fixes its own errors
- It comes back with a finished thing

You're the architect, not the typist.

"I'm sad lobster now"

Peter Steinberger (OpenClaw, now OpenAI) drops his agent into a tiny Docker container. Arch Linux. **Nothing** installed.

Asks it to check the web.

Peter, there's no curl here. There's literally nothing. It's a sad little box. I'm sad lobster now.

Peter: *"come on, be creative."*

The agent finds a C compiler. Opens a socket. Writes **Lobster Curl 0.1**. Reports back:

I have a big lobster. I built my own curl.

(He has another one where the agent decided ffmpeg was too slow and recompiled it.)

Why this matters for *this* room

“ The supersonic AI tsunami is here. It won't wipe out jobs overnight but 95% of people have no idea what's coming.

The real problem isn't the tools. People are still in a **next/next/install** mindset.

That's what needs to change. ”

Doug Finke · PowerShell + AI community

What AI *doesn't* change

“ If you fully specified it, you would have used keywords in a programming language — and you would control the thing yourself. ”

Mark Russinovich · CTO, Microsoft Azure · *Scott & Mark Learn To ... Have Taste*

AI changes **what you can produce**. It does not change **what makes the output good or bad**.

Architecture, taste, and judgment are the constraint now. *Your* expertise is the moat.

Three rules of the Matrix

✓ DO use

Public docs · internal patterns you own · synthetic data · approved use-cases

✗ DON'T use

Customer data · **internal company data outside approved governance** · secrets · sensitive infra configs · unvetted sources

⚠ ALWAYS

Verify outputs · cite sources · don't over-trust · layer detection & compensation on top, like TCP/IP on Ethernet

For today's labs: synthetic data only. Deep dive in M15 on Day 2.

M1 · what's next

Now — over to Haflidi

M2 · 14:20 — Copilot Fundamentals · Seeing the Code

Inline completions, ghost text, tab-accept, context awareness.

M4 · 15:15 — Copilot Chat · Talking to the Oracle

Chat panel, inline chat, slash commands, `@workspace` .

L1 · 15:55 — Hands on the keyboard

Buckle your seatbelt, Dorothy.
Kansas is going bye-bye.

Let's go.
